Algebra 1 4.4 ↗ Same slope

Write the equation of a line parallel to a given line

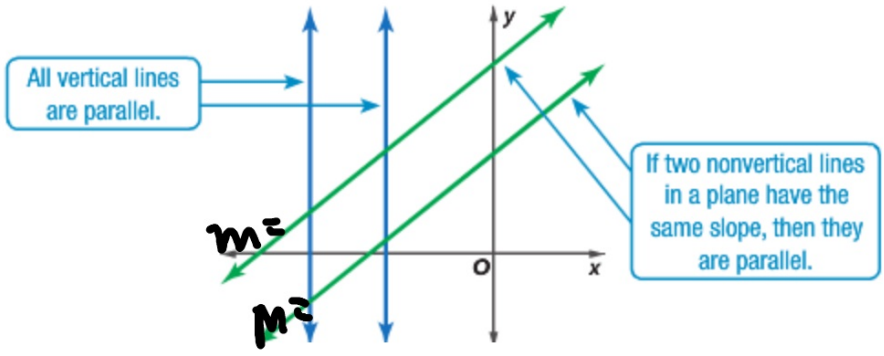
Write the equation of a line perpendicular to a given line

What do we need to write an equation for a line?

slope
vertical
horizontal } Special
parallel
perpendicular

spaghetti lines

1 Parallel Lines Lines in the same plane that do not intersect are called **parallel lines**. Nonvertical parallel lines have the same slope.



$y = mx + B$

Example 1 Parallel Line Through a Given Point

Write an equation in slope-intercept form for the line that passes through $(-3, 5)$ and is parallel to the graph of [redacted].

What do we need to know?

x y

$m = 2$

$y = 2x + B$

$5 = 2 \cdot -3 + B$

$5 = -6 + B$

$+6 \quad +6$

11

$y = 2x + 11$

GuidedPractice

$y - y_1 = m(x - x_1)$ $\quad x \; y$

1. Write an equation in point-slope form for the line that passes through $(4, -1)$ and is parallel to the graph of $y = \frac{1}{4}x + 7$.

What do we need to know?

$y + 1 = \frac{1}{4}(x - 4)$ $\quad y = x + 7$

Whiteboards

Write an equation in slope-intercept form for the line that passes through the given point and is parallel to the graph of the given equation.

1. $(-1, 2)$, $y = \frac{1}{2}x - 3$

$y = \frac{1}{2}x + 2\frac{1}{2}$

$2 = \frac{1}{2} \cdot -1 + B$

$2 = -\frac{1}{2} + B$

$+\frac{1}{2} \quad +\frac{1}{2}$

$\frac{5}{2}$

2 $(0, 4)$, $y = -4x + 5$

m

$4 = -4 \cdot 0 + B$

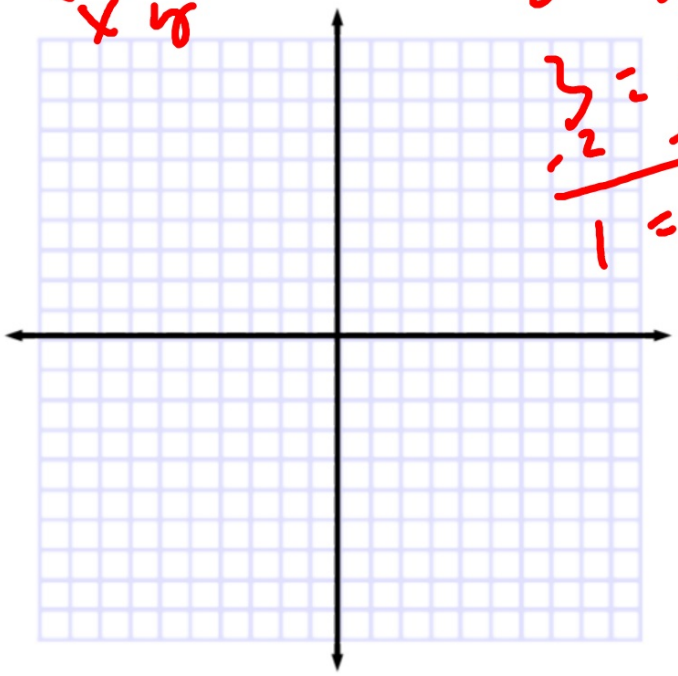
$4 = 0 + B$

$y = -4x + 4$

$y = \frac{2}{3}x - 5$

$(3, 3)$ $m = \frac{2}{3}$

$x \quad y$



$3 = \frac{2}{3} \cdot 3 + B$

$3 = 2 + B$

$-2 \quad -2$

$1 = B$

$y = \frac{2}{3}x + 1$

What does it look like when 2 lines are perpendicular?

graphing calc

$$y = -4x + 6$$

$(0, 5)$ $\quad 5 = -4 \cdot 0 + B$

$y = -4x + 5$ $\quad 5 = 0 + B$

$\quad 5 = B$

If 2 lines are perpendicular...
(what?)

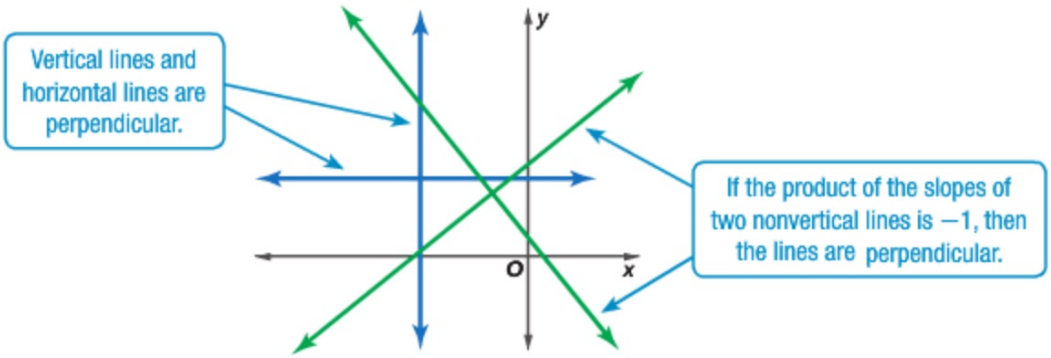
↑ meet at 90° angle

opposite & reciprocal

Ex. $\frac{2}{5} \rightarrow -\frac{5}{2}$

2 Perpendicular Lines

Lines that intersect at right angles are called **perpendicular lines**. The slopes of nonvertical perpendicular lines are opposite reciprocals. That is, if the slope of a line is 4, the slope of the line perpendicular to it is $-\frac{1}{4}$.

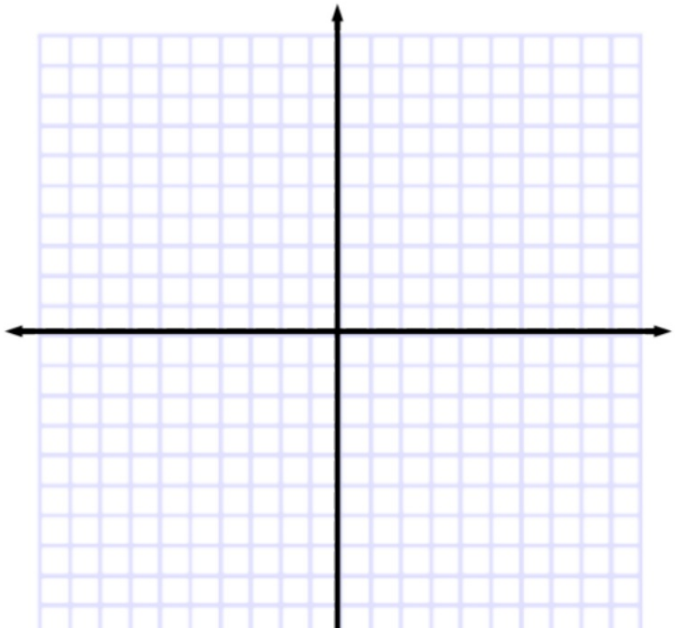


Partners:
One person write a slope.
Other person writes the perpendicular to the slope.

Eyeball is not enough...

GuidedPractice

2. CONSTRUCTION On the plans for a treehouse, a beam represented by $\overline{QR}$ has endpoints $Q(-6, 2)$ and $R(-1, 8)$. A connecting beam represented by $\overline{ST}$ has endpoints $S(-3, 6)$ and $T(-8, 5)$. Are the beams perpendicular? Explain.



(2, 6) perp to $y = \frac{1}{4}x - 5$

$m = -4 = -\frac{4}{1}$

$y = mx + B$

$6 = -4 \cdot 2 + B$

$+8 \quad = -8 + B \quad +8$

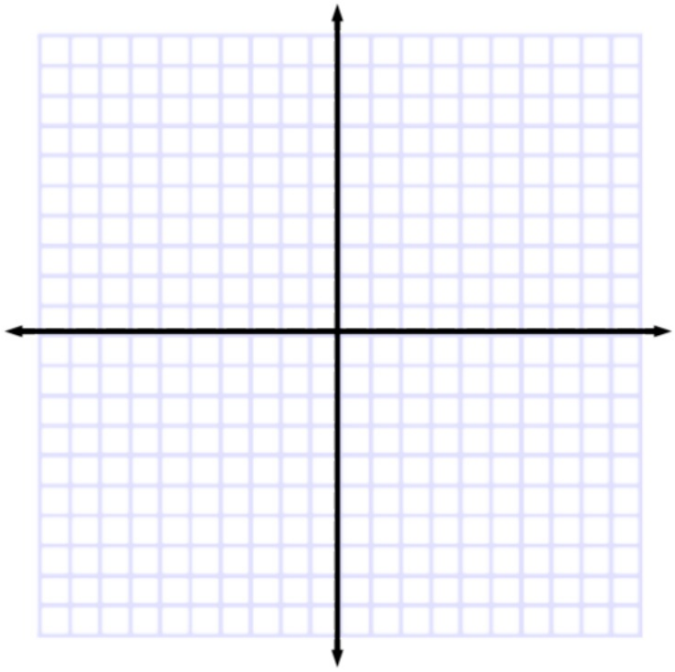
$B = 14$

$y = -4x + 14$

Example 3 Parallel or Perpendicular Lines

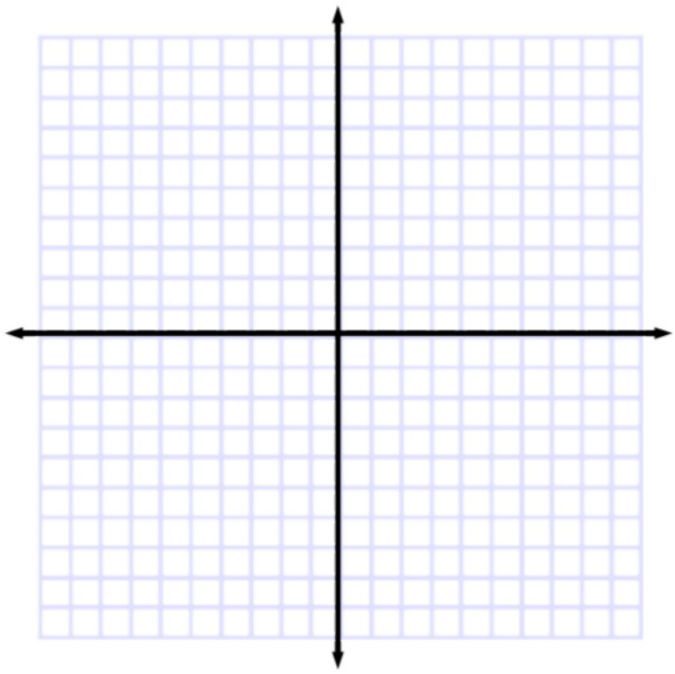
Determine whether the graphs of $y = 5$, $x = 3$, $y = -2x + 1$ are *parallel* or *perpendicular*. Explain.

What do we need to know so that we can answer the question?



3. Determine whether the graphs of $6x - 2y = -2$, $y = 3x - 4$, and $y = 4$ are *parallel* or *perpendicular*. Explain.

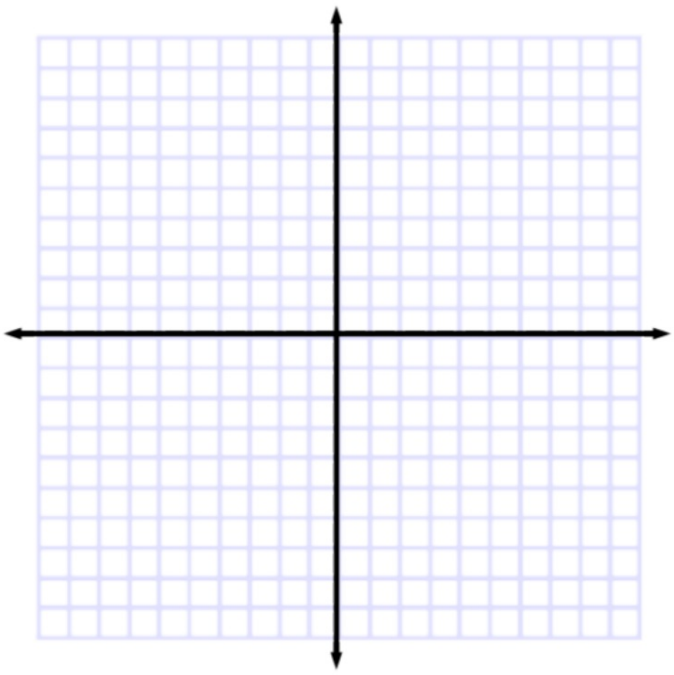
What do we need to know?



Example 4 Perpendicular Line Through a Given Point

Write an equation in slope-intercept form for the line that passes through $(-4, 6)$ and is perpendicular to the graph of $2x + 3y = 12$.

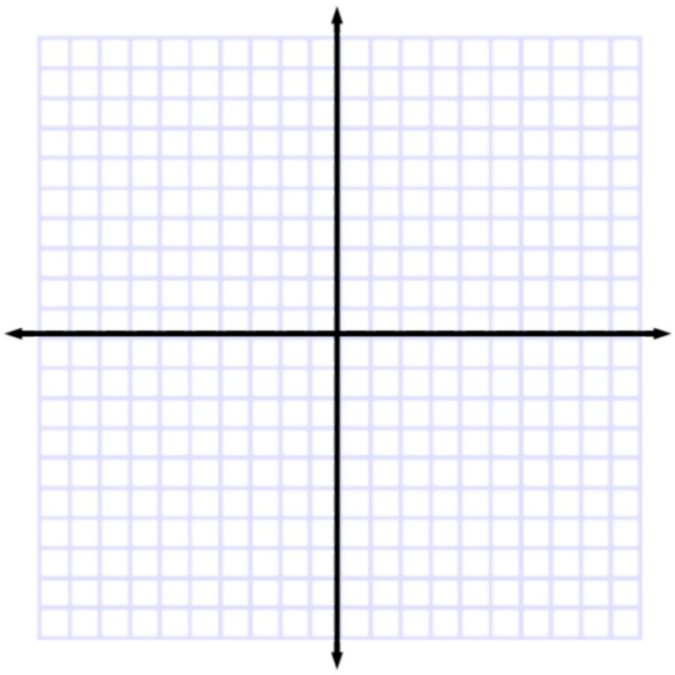
What do we need to know?



What do we need to know?

Guided Practice

4. Write an equation in slope-intercept form for the line that passes through (4,7) and is perpendicular to the graph of $y = \frac{2}{3}x - 1$.



Write an equation in slope-intercept form for the line that passes through the given point and is perpendicular to the graph of the equation.

7. $(-2, 3), y = -\frac{1}{2}x - 4$

8. $(-1, 4), y = 3x + 5$

What do we need to know?
