

Algebra 1

Write an equation

Write an equation

linear

slope $m =$

constant of variation

y-intercept

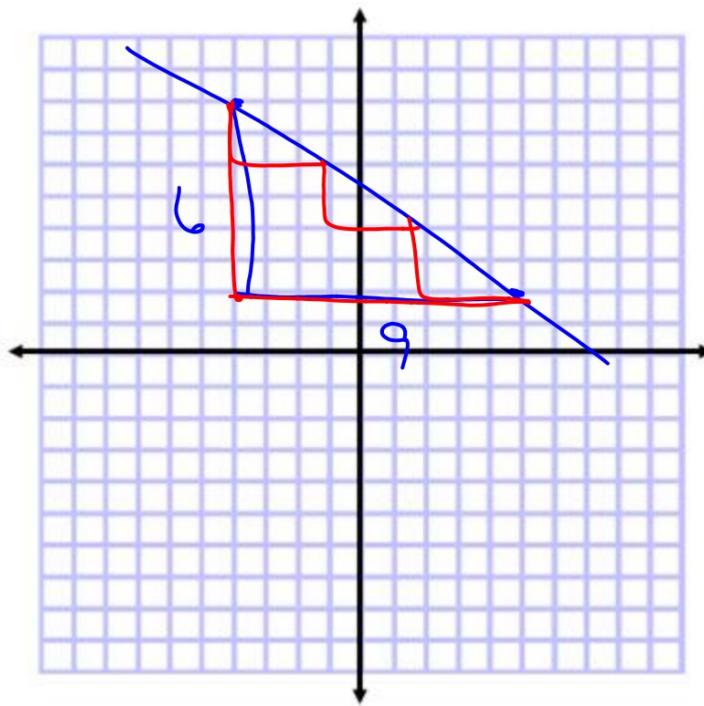

directly proportional

proportional

nonproportional

whiteboards

$(0,0) \quad y=kx$

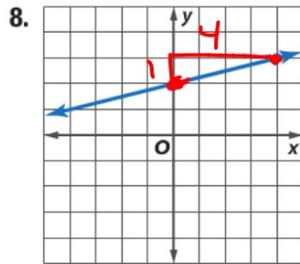

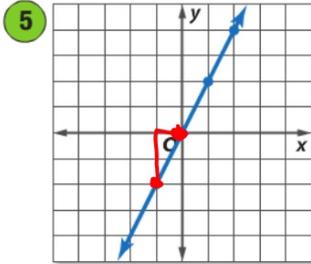

$$\frac{-6}{9} = -\frac{2}{3}$$

 **KeyConcept** Proportional Relationship

Words $f(x) = 2x$ A relationship is proportional if its equation is of the form $y = kx$, $k \neq 0$. The graph passes through $(0, 0)$.

$y = \frac{2}{1}x + 0$

$y = \frac{1}{4}x + 2$
 $f(x) = \frac{1}{4}x + 2$
