Graphing practice

$$y = 2x + 3$$

	$2x + 3$	
2	$2 \cdot 2 + 3$	7
-1	$2 \cdot -1 + 3$	1
0	$2 \cdot 0 + 3$	3
1	$2 \cdot 1 + 3$	5

$$y = 2x + 3 \quad (0, 3)$$

$$y = 2 \cdot 0 + 3 \quad (-1.5, 0)$$

$$0 + 3$$

$$0 = 2x + 3$$

$$\quad -3 \quad -3$$

$$\frac{-3}{2} = \frac{2x}{2}$$

$$-1.5 = x$$

$$y = x$$

KeyConcept Linear Function

Parent function: $f(x) = x$
Type of graph: line
Domain: all real numbers
Range: all real numbers

$$\frac{1}{1} = 1$$
$$\frac{2}{2}$$

Linear Equation	Related Function
$2x - 8 = 0$	$y = 2x - 8$

$2 \cdot 4 - 8 = 0$
 $8 - 8 = 0$
 graph

Solve by graphing

	$2x - 8$	
2	$2 \cdot 2 - 8$	-4
0	$2 \cdot 0 - 8$	-8
-1	$2 \cdot -1 - 8$	-10
3	$2 \cdot 3 - 8$	-2
.		
.		
.		
.		

1. graph related function
(may need to rearrange first)

TOV or x&y intercepts
2. solution is x-intercept
...OR...

3. Solve the equation
using algebra

(depends on directions)

b. $3x + 1 = -2$

Method 2 Solve by graphing

Solve by graphing:

1. graph related function
2. solution is x-intercept

$$\begin{aligned} 0 &= 3x - 6 \\ 0 &= 3 \cdot 2 - 6 && \text{①} \\ 0 &= 6 - 6 \end{aligned}$$

$$y = 3x - 6$$

x	3x-6	
-2	3·-2-6	-12
-1	3·-1-6	-9
0	3·0-6	-6
1	3·1-6	-3

$$0.5(-6) + 3 = 0$$
$$\underline{-3} + 3 = 0$$
$$0.5x + 3 = 0$$

$$y = 0.5x + 3$$

-2	$0.5(-2) + 3$	2
-1	$0.5(-1) + 3$	2.5
0	$0.5(0) + 3$	3
4	$0.5(4) + 3$	5
1	$0.5(1) + 3$	3.5

Example 2 Solve an Equation with No Solution

Solve each equation.

a. $3x + 7 = 3x + 1$

$y =$

$y =$

Solve using algebra
Solve by graphing

Same answer!

b. $2x - 4 = 2x - 6$

Method 2 Solve by graphing.

$y =$

$y =$

GuidedPractice

2A. $4x + 3 = 4x - 5$

2B. $2 - 3x = 6 - 3x$

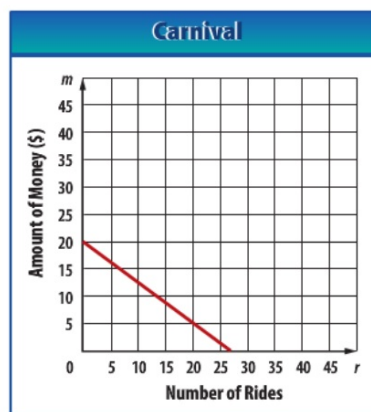

Why don't these systems have a solution?

Find the zero means
what is the x-intercept? (where $y = 0$)

Real-World Example 3 Estimate by Graphing

CARNIVAL RIDES Emily is going to a local carnival. The function $m = 20 - 0.75r$ represents the amount of money m she has left after r rides. Find the zero of this function. Describe what this value means in this context.

Guided Practice

3. **FINANCIAL LITERACY** Antoine's class is selling candy to raise money for a class trip. They paid \$45 for the candy, and they are selling each candy bar for \$1.50. The function $y = 1.50x - 45$ represents their profit y when they sell x candy bars. Find the zero and describe what it means in the context of this situation.

Where is y-coord = 0?
