Geometry 6.4

Recognize and apply properties of rectangles

Determine whether parallelograms are rectangles

parallelogram w. 4 rt \angle 's

rectangle

activity: measure rectangles

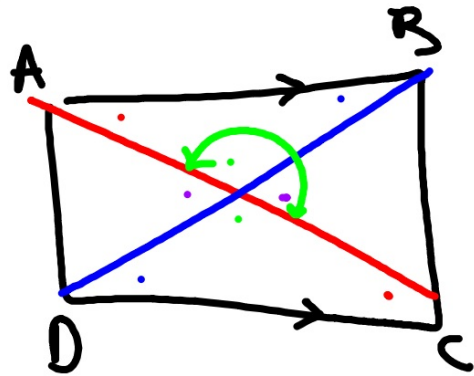

Activity:

Label the rectangle that you have been given rect. ABCD.
Use a straight edge to draw the diagonals of the rectangle.
Label the intersection point X.

Measure and label **ALL segments** ~~and angles~~.

Write down 4 facts that you observe.

1. Opp. sides \cong
2. diagonals int. at X
3. X is a mp
4. diag. \cong
- * 5. diag segments \cong

Find somebody else that had the same rectangle as yours.
Compare your findings.

1 Properties of Rectangles A **rectangle** is a parallelogram with four right angles.
By definition, a rectangle has the following properties.

- ✓ All four angles are right angles.
- ✓ Opposite sides are parallel and congruent.
- ✓ Opposite angles are congruent.
- ✓ Consecutive angles are supplementary.
- ✓ Diagonals bisect each other.

Rectangle $ABCD$

In addition, the diagonals of a rectangle are congruent.

Theorem 6.13 Diagonals of a Rectangle

If a parallelogram is a rectangle, then its diagonals are congruent.

Abbreviation If a \square is a rectangle, *diag. are* \cong .

Example If $\square JKLM$ is a rectangle, then $\overline{JL} \cong \overline{MK}$.

You will prove Theorem 6.13 in Exercise 33.

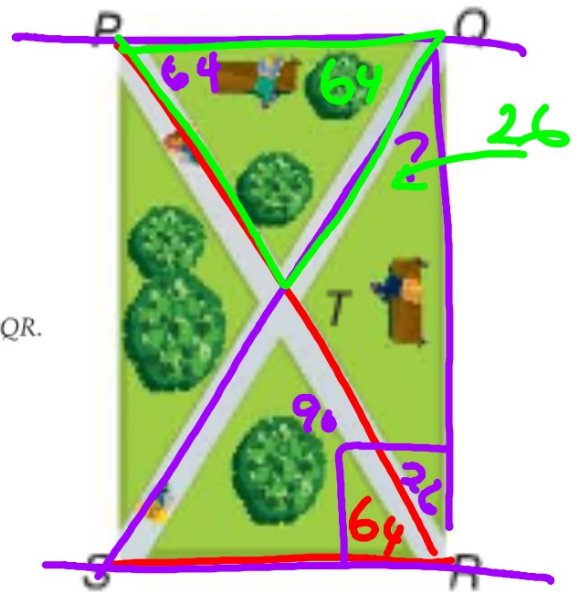

Real-World Example 1 Use Properties of Rectangles

EXERCISE A rectangular park has two walking paths as shown. If $PS = 180$ meters and $PR = 200$ meters, find QT .

Guided Practice Refer to the figure in Example 1.

1A. If $TS = 120$ meters, find PR .

1B. If $m\angle PRS = 64$, find $m\angle SQR$.

Example 2 Use Properties of Rectangles and Algebra

ALGEBRA Quadrilateral $JKLM$ is a rectangle. If $m\angle KJL = 2x + 4$ and $m\angle JLK = 7x + 5$, find x .

$$2x + 4 + 7x + 5 + 90 = 180$$

$$9x + 99 = 180$$

$$9x = 81$$

Guided Practice

2. Refer to the figure in Example 2. If $JP = 3y - 5$ and $MK = 5y + 1$, find y .

$$\begin{aligned} 6y - 10 &= 5y + 1 \\ -5y + 10 &\quad -5y + 10 \\ \hline y &= 11 \end{aligned}$$

Theorem 6.14 Diagonals of a Rectangle

If the diagonals of a parallelogram are congruent, then the parallelogram is a rectangle.

Abbreviation *If diag. of a \square are \cong , then \square is a rectangle.*

Example If $\overline{WY} \cong \overline{XZ}$ in $\square WXYZ$, then $\square WXYZ$ is a rectangle.

You will prove Theorem 6.14 in Exercise 34.

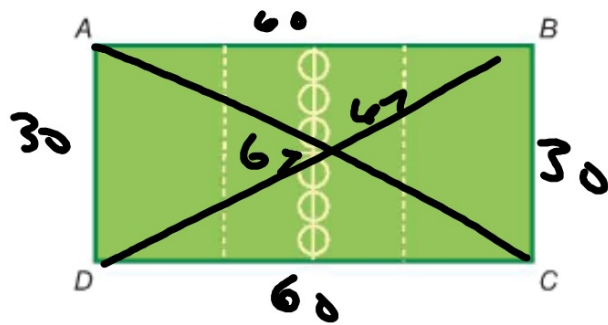

Ex. you can win arguments with your spouse :)

Real-World Example 3 Providing Rectangle Relationships

DODGEBALL A community recreation center has created an outdoor dodgeball playing field. To be sure that it meets the ideal playing field requirements, they measure the sides of the field and its diagonals. If $AB = 60$ feet, $BC = 30$ feet, $CD = 60$ feet, $AD = 30$ feet, $AC = 67$ feet, and $BD = 67$ feet, explain how the recreation center can be sure that the playing field is rectangular.

Which distance(s) would it be helpful to know?

Example 4 Rectangles and Coordinate Geometry

COORDINATE GEOMETRY Quadrilateral $PQRS$ has vertices $P(-5, 3)$, $Q(1, -1)$, $R(-1, -4)$, and $S(-7, 0)$. Determine whether $PQRS$ is a rectangle by using the Distance Formula.

$SQ =$
 $PR =$
