

## Geometry 2.2

Determine truth values of conjunctions, disjunctions, negations

Represent conjunctions, disjunctions, negations using Venn diagrams

Determine counterexamples

statement (proposition) Can be T or F

negation *opp of not P ~ P*

truth value *T F*

compound statement *P and Q*

conjunction (and) *^ P ^ Q*

disjunction (or) *v P or R*

truth table

Venn diagram

P: Today is Friday

*p: A rectangle is a quadrilateral.*

*Q = Pizza*

*R = Oct.*

Compound statement:

p: Today is Thursday. **T**

q: September has 37 days. **F**

p and q  
p or q  
not p  
not q

$P \wedge Q$  today is Thurs and Sept. 37  
 $T \wedge F = F$

$P \vee Q$  today Thurs or Sept. 37

$\sim P$  today not Thurs  $T \vee F = T$

$\sim Q$  Sept. not 37 days  $F \vee T = T$

$p$ : A rectangle is a quadrilateral. T  
 $q$ : A rectangle is convex. T

$p$  and  $q$ :

$$p \wedge q \\ T \wedge T = T$$

"and" means both are true

$p$  or  $q$

$$p \vee q \\ T \vee T = T$$

### Example 1 Truth Values of Conjunctions

Use the following statements to write a compound statement for each conjunction. Then find its truth value. Explain your reasoning.

$p$ : The figure is a triangle. **F**

$q$ : The figure has two congruent sides. **T**

$r$ : The figure has three acute angles. **F**

a.  $p$  and  $r$

$p \wedge r$   
the fig is  $\Delta$  and fig has 3 acute  $\angle$ s  
 $T \wedge F = F$

b.  $q \wedge \sim r$

p: Today is Tuesday.  $F$   
q: October has 31 days.  $T$

$p$  or  $q$ :

$P \vee Q$

$F \vee T = T$

"Or" means at least one is true...could be both

## Example 2 Truth Values of Disjunctions

Use the following statements to write a compound statement for each disjunction. Then find its truth value. Explain your reasoning.

$p$ : January is a fall month. **F**

$q$ : January has only 30 days. **F**

$r$ : January 1 is the first day of a new year. **T**

a.  $p$  or  $r$   **$P \vee R$**

b.  $p \vee q$   **$F \vee T = T$**

c.  $\sim p \vee r$   **$P \vee Q$**   
 **$F \vee F = F$**

**$T \vee T = T$**

### Guided Practice

2A.  $r$  or  $p$

2B.  $q \vee \sim r$

2C.  $p \vee \sim q$

P. 100

ConceptSummary Negation, Conjunction, Disconjunction		
Statement	Words	Symbols
negation	a statement that has the opposite meaning and truth value of an original statement	$\sim p$ , read not $p$ 
conjunction	a compound statement formed by joining two or more statements using the word <i>and</i>	$p \wedge q$ , read $p$ and $q$ 
disconjunction	a compound statement formed by joining two or more statements using the word <i>or</i>	$p \vee q$ , read $p$ or $q$ 

Generic: When you don't have the actual statement(s) yet.

A convenient method for organizing the truth values of statements is to use a **truth table**. Truth tables can be used to determine truth values of negations and compound statements.

Negation	
$p$	$\neg p$
T	F
F	T

Conjunction		
$p$	$q$	$p \wedge q$
T	T	T
T	F	F
F	T	F
F	F	F

$p \wedge q$   
 $T \wedge T = T$   
 $T \wedge F = F$   
 $F \wedge T = F$   
 $F \wedge F = F$

Disjunction		
$p$	$q$	$p \vee q$
T	T	T
T	F	T
F	T	T
F	F	F

$p \vee q$   
 $T \vee T = T$   
 $T \vee F = T$   
 $F \vee T = T$   
 $F \vee F = F$

	$p$	$q$	$\neg p$	$p \wedge q$	$p \vee q$
negation	T	T	F	T	T
	T	F	F	F	T
	T	T	F	T	T
	T	F	F	F	T
	F	T	T	F	T
	F	F	T	F	F

and

or

Start with columns for p, q

**Example 3** Construct Truth Tables

Construct a truth table for  $\sim p \vee q$ .

p	q	$\sim p$	$\sim p \vee q$	ans
T	T	F	T	T
T	F	F	F	F
F	T	T	T	T
F	F	T	T	T

1 Make columns with headings that include each original statement, any negations of these statements, and the compound statement itself.

$p$	$q$	$\sim p$	$\sim p \vee q$
T	T	F	T
T	F	F	F
F	T	T	T
F	F	T	T

4 Use the truth values for each part of the compound statement to determine the truth value of the statement.

2 List the possible combinations of truth values.

3 Use the truth values of  $p$  to determine the truth values of its negation.

Add a column for your final answer

### Guided Practice

3. Construct a truth table for  $\sim p \wedge \sim q$ .

P	Q	$\sim p$	$\sim q$	$\sim p \wedge \sim q$	ans.
T	T	F	F	F $\wedge$ F	
T	F	F	T	F $\wedge$ T	
F	T	T	F	T $\wedge$ F	
F	F	T	T	T $\wedge$ T	T

Venn diagram:  
Sophomores  
Boys

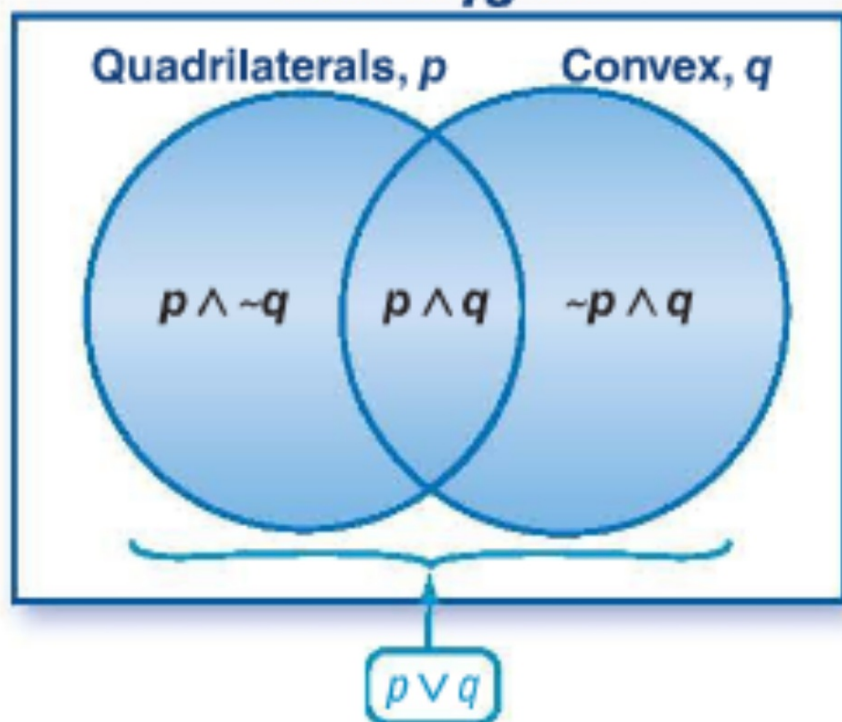

**2 Venn Diagrams** Conjunctions can be illustrated with Venn diagrams. Consider the conjunction given at the beginning of the lesson.

$p$  and  $q$ : **A rectangle is a quadrilateral**, and  
**a rectangle is convex**.

The Venn diagram shows that a rectangle ( $R$ ) is located in the *intersection* of the set of quadrilaterals and the set of convex polygons. In other words, rectangles must be in the set containing quadrilaterals *and* in the set of convex polygons.

## All Polygons

### Real-World Example 4 Use Venn Diagrams

**SCHEDULING** The Venn diagram shows the number of people who can or cannot attend the May or the June Spanish Club meetings.

- How many people can attend the May or the June meeting?
- How many people can attend both the May and the June meetings?
- Describe the meetings that the 14 people located in the nonintersecting portion of the June region can attend.

### Guided Practice

4. **PROM** The Venn diagram shows the number of graduates last year who did or did not attend their junior or senior prom.
- A. How many graduates attended their senior but not their junior prom?
  - B. How many graduates attended their junior and senior proms?
  - C. How many graduates did not attend either of their proms?
  - D. How many students graduated last year? Explain your reasoning.
