 polar graphs and gallery walk

Polar Coordinate Search & Destroy

You have 3 destroyers (2x) and 2 battleships (3x).

Secretly place each ship along an arc OR segment on the polar coordinate graph. Use only the angles (30° , 45° , etc.) provided on the graph.

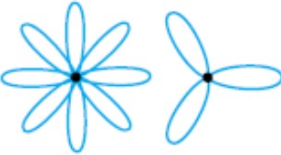

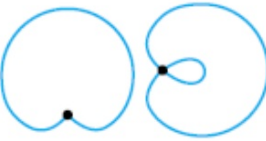

Players alternate naming polar coordinates (r, θ) . Players may choose either degrees or radians to designate the angles.

Your opponent will inform you whether a shot is a hit or miss. Mark your grid accordingly. If you repeat coordinates that have already been used, you lose your turn.

Object of the game: sink all of your opponent's ships.

Classical Curves					
Curve	rose	lemniscate (pronounced leh-m NEEHS kuh-t)	limaçon (pronounced lee muh SOHN)	cardioid (pronounced KARD ee oyd)	spiral of Archimedes (pronounced ar kih MEED eez)
Polar Equation	$r = a \cos n\theta$ $r = a \sin n\theta$ n is a positive integer.	$r^2 = a^2 \cos 2\theta$ $r^2 = a^2 \sin 2\theta$	$r = a + b \cos \theta$ $r = a + b \sin \theta$	$r = a + a \cos \theta$ $r = a + a \sin \theta$	$r = a\theta$ (θ in radians)
General Graph					

$$r = 3 - 3 \sin 210$$

$$= 3 - 3 \cdot -\frac{1}{2} \quad 3 + 1.5$$

4

Graph the system of polar equations. Solve the system using algebra and trigonometry and compare the solutions to those on your graph.

$$\rightarrow r = 3 - 3 \sin \theta$$

$$r = 4 - \sin \theta$$

(r, θ)

$$\begin{array}{r} 3 - 3 \sin \theta = 4 - \sin \theta \\ -3 + \sin \theta \quad -3 + \sin \theta \end{array}$$

$(4.5, 210)$

$(4.5, 330)$

$$\frac{-2 \sin \theta = 1}{-2 \quad -2}$$

$$\sin \theta = -\frac{1}{2}$$

$$r = 3 - 3 \sin 210$$

$$= 3 - 3 \left(-\frac{1}{2} \right)$$

$$3 + 1.5$$
