

Trig 6.7

Graph tangent, cotangent, secant, cosecant functions

Write equations of trig functions

$$\frac{1}{\tan} = \cot \quad \text{tangent} = \frac{\text{opp}}{\text{adj}} = \frac{y}{x} \quad \text{undef. @}$$

$$\frac{1}{\cot} = \tan \quad \text{cotangent} = \frac{\text{adj}}{\text{opp}} = \frac{x}{y} \quad \text{undef. @ } 0, \pi$$

reciprocal

$$\left[ \begin{array}{l} \text{secant } \frac{1}{\cos} \\ \text{cosecant } \frac{1}{\sin} \end{array} \right.$$

Graph by hand:  
 $y = \tan(x)$

Now back to radians

Properties  
of the Graph  
 $y = \tan x$

1. The period is  $\pi$ .
2. The domain is the set of real numbers except  $\frac{\pi}{2}n$ , where  $n$  is an odd integer.
3. The range is the set of real numbers.
4. The  $x$ -intercepts are located at  $\pi n$ , where  $n$  is an integer.
5. The  $y$ -intercept is 0.
6. The asymptotes are  $x = \frac{\pi}{2}n$ , where  $n$  is an odd integer.

int & undef trade places

Reciprocals: crossing places & asymptotes

Same shape (refl)  
period ( $\pi$ )

Properties of  
the Graph of  
 $y = \cot x$

- ✗ 1. The period is  $\pi$ .
- ✓ 2. The domain is the set of real numbers except  $\pi n$ , where  $n$  is an integer.
3. The range is the set of real numbers.
4. The  $x$ -intercepts are located at  $\frac{\pi}{2}n$ , where  $n$  is an odd integer.
5. There is no  $y$ -intercept.
6. The asymptotes are  $x = \pi n$ , where  $n$  is an integer.

b.  $\cot \frac{7\pi}{2} = 0$

$\cot(3.5\pi)$

tan & cot only (for now)

Find each value by referring to the graphs of the trigonometric functions.

4.  $\tan 4\pi = 0$

5.  ~~$\csc\left(\frac{7\pi}{2}\right)$~~

**Example** **1** Find each value by referring to the graphs of the trigonometric functions.

a.  $\tan \frac{9\pi}{2}$

$$\tan 4.5\pi = \text{undef}$$

~~\*~~

Find each value by referring to the graphs of the trigonometric functions.

13.  $\cot\left(\frac{5\pi}{2}\right) = 0$

14.  $\tan(-8\pi)$

15.  ~~$\sec\left(\frac{9\pi}{2}\right)$~~

$2.5\pi$

reminder: period for tan & cot is  $\pi$ ... all other trig functions have period  $2\pi$

Graph each function.

8.  $y = \tan\left(\theta + \frac{\pi}{4}\right)$

9.  ~~$y = \sec(2\theta + \pi) - 1$~~

Find the values of  $\theta$  for which each equation is true.

~~6.  $\sec \theta = -1$~~

7.  $\cot \theta = 1$

$\frac{\pi}{4} + \pi n$

Write an equation for the given function given the period, phase shift, and vertical shift.

reminder: default period is  $\pi$

$$A = 2 \quad v_s + 3$$

left  
↓

11. cotangent function, period =  $2\pi$ , phase shift =  $-\frac{\pi}{4}$ , vertical shift = 0

$$y = -3 + 2 \cot \frac{1}{2} \left( \theta + \frac{\pi}{4} \right)$$

$$\frac{\pi}{n} = \frac{2\pi}{1}$$

$$\frac{2\pi \cdot n = \pi}{2\pi} = \frac{1}{2}$$

$y = \sin(x)$  &  $y = \csc(x)$
