

## Algebra 1 4.5

Investigate relationships between quantities by using scatterplots

Use lines of fit to make and evaluate predictions

bivariate data  $(x, y)$

line of fit (prediction equation)

independent variable ( $x$ )

Dependent variable ( $y$ )

interpolation

extrapolation

$r$  correlation quick description

## ConceptSummary Scatter Plots

As  $x$  increases,  $y$  increases

As  $x$  decreases,  $y$  decreases

$x$  and  $y$  are not related

## Real-World Example 1 Evaluate a Correlation

**WAGES** Determine whether the graph shows a positive, negative, or no correlation. If there is a positive or negative correlation, describe its meaning in the situation.

"It goes up" is not the kind of answer I am looking for.

1. Refer to the graph on international travel. Determine whether the graph shows a *positive*, *negative*, or *no* correlation. If there is a positive or negative correlation, describe its meaning.

### Real-World Example 3 Use Interpolation or Extrapolation

**TRAVEL** Use the scatter plot to find the approximate number of United States travelers to international countries in 1996.

1

51,000,000 travelers

Source: Statistical Abstract of the United States

## Real-World Example 2 Write a Line of Fit

**ROLLER COASTERS** The table shows the largest vertical drops of nine roller coasters in the United States and the number of years after 1988 that they were opened. Identify the independent and the dependent variables. Is there a relationship in the data? If so, predict the vertical drop in a roller coaster built 30 years after 1988.

Years Since 1988	1	3	5	8	12	12	12	13	15
Vertical Drop (ft)	151	155	225	230	306	300	255	255	400

Source: Ultimate Roller Coaster

**Vertical Drops of Roller Coasters**

550 ft

extrapolation  
extend past  
your data to  
predict

# Guided Practice

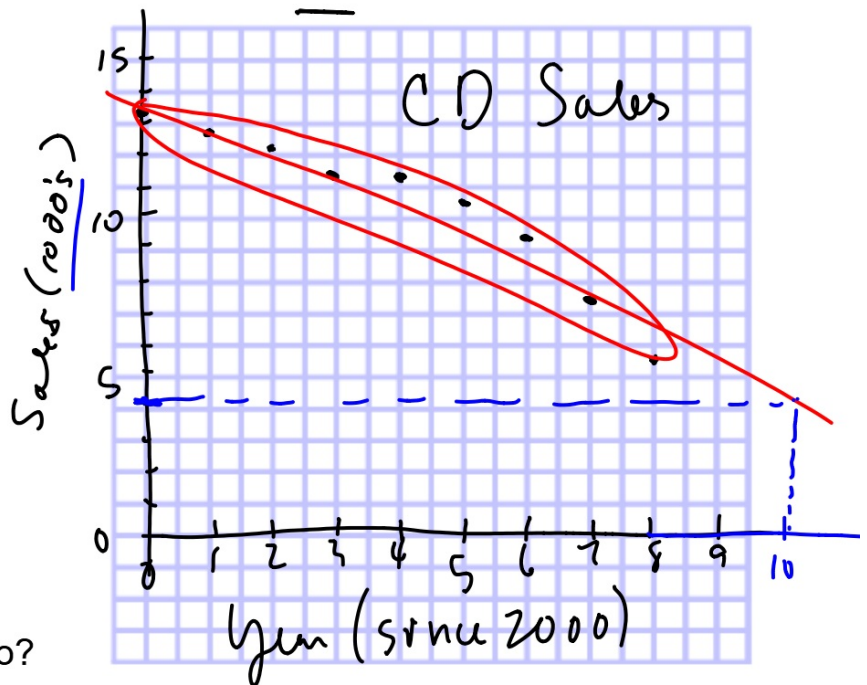

Since 2000

2. **MUSIC** The table shows the dollar value in millions for the sales of CDs for the year. Make a scatter plot and determine what relationship exists, if any.

Year	2000	2001	2002	2003	2004	2005	2006	2007	2008
Sales	13,215	12,909	12,044	11,233	11,447	10,520	9373	7452	5471

2010

4000  
CD's  
sold

Graph the scatterplot

Where would a reasonable line go?

Use 2 points on the line:

far apart is better than close together

Write an equation

Sometimes follow-up question

► **Guided**Practice

3. **MUSIC** Use the equation for the line of fit for the data in Guided Practice 2 to estimate CD sales in 2015.
