

## Algebra 1 4.3

Write equations of lines in point-slope form

Write linear equations in different forms

slope-intercept form

$$y = mx + B$$

point-slope form

$$y - ? = m(x - ?)$$

standard form

speed dating

$$Ax + By = C$$

$$y = mx + B$$

$$Ax + By = C$$

### KeyConcept Point-Slope Form

Words

The linear equation  $y - y_1 = m(x - x_1)$  is written in point-slope form, where  $(x_1, y_1)$  is a given point on a nonvertical line and  $m$  is the slope of the line.

Symbols

$$y - y_1 = m(x - x_1)$$

$$y - 3 = \frac{1}{2}(x - 2)$$

$$\begin{array}{r} \textcircled{y} - 3 = \textcircled{\frac{1}{2}}(\textcircled{x} - \textcircled{2}) \\ +3 \quad \quad \quad -3 \end{array}$$

$$y = \frac{1}{2}x + 2$$

$$2 \cdot y = \frac{1}{2} \cdot 2x + 2 \cdot 2$$

$$-x \quad \textcircled{2y} = x + \textcircled{4}$$

$$\frac{-x}{-1} + \frac{2y}{-1} = \frac{4}{-1}$$

$$1x - 2y = -4$$

$$A = 1 \quad B = -2 \\ C = -4$$

Write the equation of the line passing through (1,5) and (8,3).  $m = -\frac{2}{7}$

a) point-slope form

$$y - 3 = -\frac{2}{7}(x - 8)$$

b) slope-intercept form

$$y = -\frac{2}{7}x + \frac{37}{7}$$

$$y - 3 = -\frac{2}{7}x + \frac{16}{7}$$

$+3$

c) standard form

$$7y = -2x + 37$$

$+2x$        $+2x$

$$2x + 7y = 37$$

$$Ax + By = C$$

### *Standard form*

- *In order*
- *Only integers (no fractions, no decimals)*
- *No GCF*
- *First term positive*
