

Algebra 2 5.3

Evaluate polynomial functions

Identify general shapes of polynomial function graphs

parent graph

degree

coefficient

leading coefficient

function notation

end behavior

even function

odd function

Quiz 5.1-5.2

activity: graph matching

2 Graphs of Polynomial Functions The general shapes of the graphs of several polynomial functions show the *maximum* number of times the graph of each function may intersect the x -axis. This is the same number as the degree of the polynomial.

crossing points
max/min (turning points)
end behavior

$y \rightarrow \infty$ if $x \rightarrow \infty$
 $y \rightarrow -\infty$ if $x \rightarrow -\infty$

$y \rightarrow \infty$ if $x \rightarrow -\infty$
 $y \rightarrow -\infty$ if $x \rightarrow \infty$

$y \rightarrow -\infty$ if $x \rightarrow \infty$
 $y \rightarrow -\infty$ if $x \rightarrow -\infty$

You have to know the code:
y does this..... when x does this....

Example 4 Graphs of Polynomial Functions

For each graph,

- describe the end behavior,
- determine whether it represents an odd-degree or an even-degree polynomial function, and
- state the number of real zeros.

a.

$y \rightarrow -\infty$ if $x \rightarrow -\infty$
 $y \rightarrow -\infty$ if $x \rightarrow \infty$

$d = 4$ even
 zeros = 2

b.

$y \rightarrow \infty$ if $x \rightarrow -\infty$
 $y \rightarrow -\infty$ if $x \rightarrow \infty$

$d = 5$ (odd)
 zeros = 5

say it first... then translate (code)

"y does this..."

"when x does this..."

matching activity

Key Concept Zeros of Even- and Odd-Degree Functions

Odd-degree functions will always have an odd number of real zeros. Even-degree functions will always have an even number of real zeros or no real zeros at all.

Even-Degree Polynomials

Odd-Degree Polynomials

► **Guided** Practice

4A.
