

Precalc 10.1

$$\sqrt{x^2} = \sqrt{25}$$

$$x = \pm 5$$

Find the distance between 2 points on the coordinate plane*

Find the midpoint of 2 points*

Use analytical methods to prove geometric relationships

distance

midpoint

analytic geometry

proof (CSI)

$$(2, 5)$$

$$(a, b)$$

$$(1, 8)$$

$$(g, r)$$

$$9 + 1 = d^2$$

$$10 = d^2$$

$$\sqrt{10} = d \approx 3.2$$

$$\sqrt{(a-g)^2 + (b-r)^2}$$

* Geometry. Algebra 1. Algebra 2

Find the distance between each pair of points with the given coordinates. Then, find the coordinates of the midpoint of the segment that has endpoints at the given coordinates.

5. $(5, 1), (5, 11)$

6. $(0, 0), (-4, -3)$

7. $(\underline{-2}, 2), (\underline{0}, 4)$

Ex. 3

A(3, 2) B(2, -4) C(-2, -3) D(-1, 3)

Is it a parallelogram?

How do you KNOW?

$$m = \frac{\text{rise}}{\text{run}}$$

$$m_{\overline{DA}} = -\frac{1}{4}$$

$$m_{\overline{CB}} = -\frac{1}{4}$$

$$m_{\overline{CD}} = 6$$

$$m_{\overline{AB}} = 6$$

yes

Use the fewest possible number of variables
Use logic to place vertices

3. Determine whether each diagram represents an isosceles triangle. Explain your reasoning.

Not by eyeball, have to have evidence...

WB 10.1
